

Lesson 5.

# Classification of accounting accounts

Ph.D in Economic sciences,  
Associate Professor  
Ulan Moldokmatov

## **AGENDA**

### I. Permanent accounting accounts:

- ✓ Current and non-current asset accounts.
- ✓ Current and non-current liability accounts
- ✓ Capital accounts.

### II. Temporary Accounting Accounts:

Revenue and expense accounts

## I. Permanent accounting accounts:

### Types of Permanent Accounts:

#### 1. Asset Accounts:

1. **Cash**: Tracks the company's cash on hand and in bank accounts.
2. **Accounts Receivable**: Represents amounts owed to the company by customers.
3. **Inventory**: The value of goods available for sale.
4. **Property, Plant, and Equipment (PP&E)**: Long-term tangible assets used in the business.

#### 2. Liability Accounts:

1. **Accounts Payable**: Represents amounts the company owes to suppliers and creditors.
2. **Notes Payable**: Short-term or long-term borrowings that the company needs to repay.
3. **Accrued Liabilities**: Expenses that have been incurred but not yet paid.

#### 3. Equity Accounts:

1. **Common Stock**: Represents the capital contributed by shareholders.
2. **Retained Earnings**: Accumulated net income not distributed to shareholders as dividends.
3. **Additional Paid-In Capital**: The excess amount paid by investors over the par value of stock.

Permanent accounts, also known as real accounts, are balance sheet accounts that carry their ending balances into the next accounting period. These accounts are not closed at the end of an accounting period and continue to accumulate balances over time. They are essential for reflecting a company's ongoing financial position.

### **Key Characteristics of Permanent Accounts:**

- 1. Ongoing Balance:** The balances in permanent accounts do not reset to zero at the end of the accounting period; instead, they carry over into the next period.
- 2. Found on the Balance Sheet:** Permanent accounts are typically balance sheet accounts, which include assets, liabilities, and equity accounts.
- 3. Track Long-Term Financial Position:** These accounts are used to monitor the company's financial position over the long term, unlike temporary accounts (like revenue and expense accounts), which are closed out at the end of each period to calculate net income for that period.

## **Example of How Permanent Accounts Work:**

- **Beginning Balance:** Suppose at the beginning of the year, the company's cash account (a permanent account) has a balance of \$50,000.
- **Transactions During the Year:** Throughout the year, the company receives \$100,000 from sales and pays \$80,000 in expenses.
- **End of Year Balance:** At the end of the year, the cash account balance would be \$70,000 (\$50,000 beginning balance + \$100,000 receipts - \$80,000 payments).
- **Carry Forward:** The \$70,000 cash balance would be carried forward as the beginning balance for the next year.

## **Importance of Permanent Accounts:**

- **Long-Term Financial Management:** Permanent accounts are crucial for understanding a company's financial health over time.
- **Balance Sheet Integrity:** They ensure the accuracy of the balance sheet, which is critical for stakeholders who rely on it for decision-making.
- **Cumulative Nature:** They help in tracking the accumulation of assets, liabilities, and equity over multiple accounting periods.

## II. Temporary Accounting Accounts:

### Revenue and expense accounts

Revenue, expense, and withdrawal accounts are used to collect information for a single accounting period. These accounts are called **Temporary Accounts**.

Dollar amounts in **Temporary Accounts** are not carried forward from one accounting period to the next. **Temporary Accounts** start each new accounting period with a zero balance.

Assets, liabilities, and owner's capital accounts are **Permanent Accounts**.

Dollar amounts in **Permanent Accounts** are carried forward from one accounting period to the next. **Permanent Accounts** are **continuous** from one accounting period to the next.

## Rules for Revenue accounts

A **revenue** account is **increased** on the **credit** side.

A **revenue** account is **decreased** on the **debit** side.

The **normal balance** for a **revenue** account is the **credit** side.

| Revenue Account |             |
|-----------------|-------------|
| Debit Side      | Credit Side |
| -               | +           |

**Normal Balance**

The illustration shows a stylized profile of a person's head with a blue dotted pattern inside. Three pink speech bubbles point from the text above to different parts of the head:

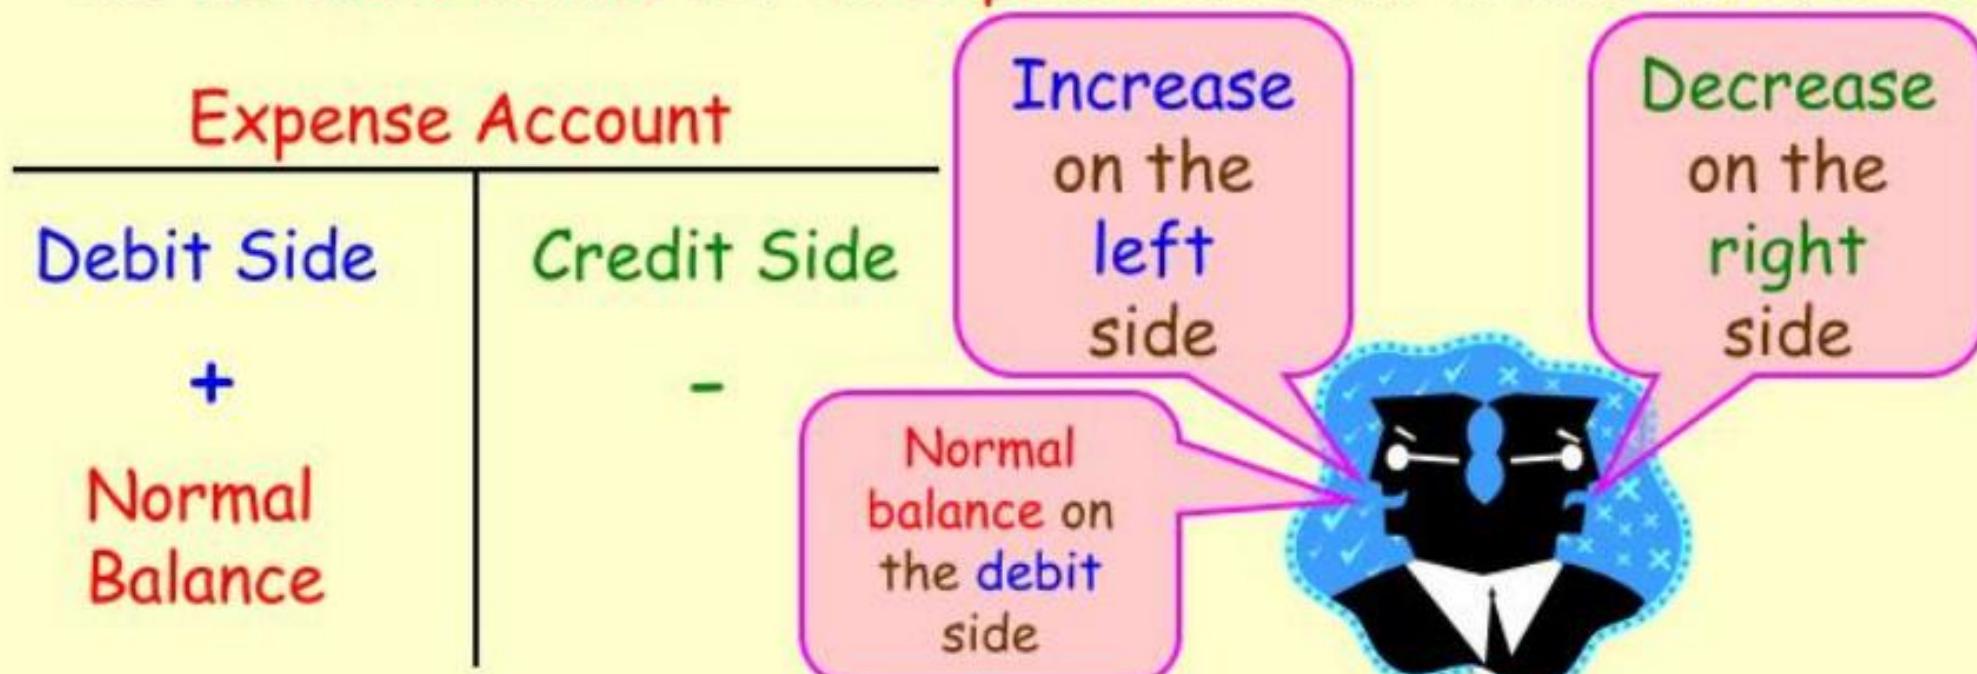

- A bubble pointing to the left side of the head contains the text "Decrease on the left side".
- A bubble pointing to the right side of the head contains the text "Increase on the right side".
- A bubble pointing to the bottom of the chin area contains the text "Normal balance on the credit side".

## Rules for Expence accounts

An **expense** account is **increased** on the **debit** side.

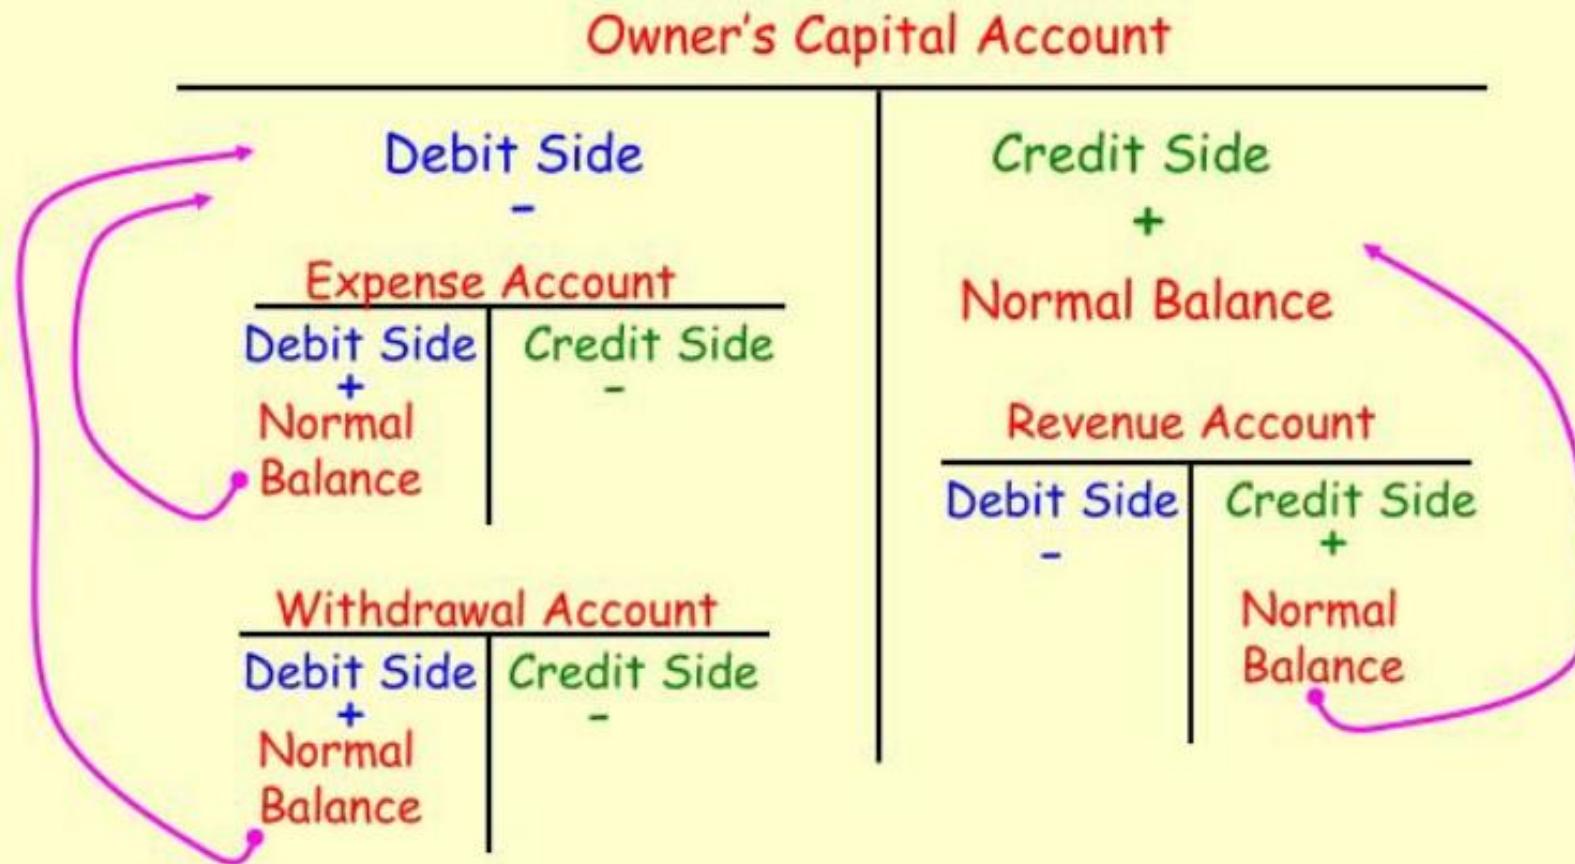

An **expense** account is **decreased** on the **credit** side.

The **normal balance** for an **expense** account is the **debit** side.

## Summary of Rules for Temporary accounts

The balances in the **Temporary Accounts** are transferred into the **Owner's Capital Account** at the end of each accounting period.

In contrast, **temporary accounts** like revenues, expenses, and dividends are closed at the end of each accounting period, and their balances are transferred to retained earnings or other equity accounts, so they start the new period with a zero balance.

# REVENUE TRANSACTION

## Ex.1

Roadrunner received a check for \$1,200 from a customer, Sims Corporation, for delivery services.

- 1) Identify ➔ Accounts affected are **Cash in Bank** and **Delivery Revenue**
- 2) Classify ➔ **Cash in Bank** is an **asset** account and **Delivery Revenue** is a **revenue** account
- 3) Increase or Decrease ➔ **Cash in Bank** is **increased** by \$1,200 and **Delivery Revenue** is **increased** by \$1,200
- 4) Debit and Credit Rule ➔ **Asset** accounts are **increased** on the **debit** side and **revenue** accounts are **increased** on the **credit** side
- 5) Do Debits Equal Credits ➔ **Debits** equal **credits**

| Cash in Bank |   | Delivery Revenue |       |
|--------------|---|------------------|-------|
| +            | - | -                | +     |
| 1,200        |   |                  | 1,200 |

1,200 = 1,200  
 Debit = Credit

# EXPENSE TRANSACTION

## Ex.2

Roadrunner wrote a check for \$700 to pay the rent for the month .

- 1) Identify ➔ Accounts affected are **Rent Expense** and **Cash in Bank**
- 2) Classify ➔ **Rent Expense** is an **expense** account and **Cash in Bank** is an **asset** account
- 3) Increase or Decrease ➔ **Rent Expense** is increased by \$700 and **Cash in Bank** is decreased by \$700
- 4) Debit and Credit Rule ➔ **Expense** accounts are increased on the **debit** side and **asset** accounts are **decreased** on the **credit** side
- 5) Do Debits Equal Credits ➔ Debits equal credits

| Rent Expense | Cash in Bank |
|--------------|--------------|
| +            | +            |
| 700          | 700          |

700 = 700  
 Debit Credit

## CREDIT EXPENSE TRANSACTION

Ex.3

Beacon Advertising prepared an advertisement for Roadrunner. Roadrunner will pay Beacon's \$75 fee later.

1) Identify

Accounts affected are **Advertising Expense** and **Accounts Payable - Beacon Advertising**

2) Classify

**Advertising Expense** is an **expense** account and **Accounts Payable - Beacon Advertising** is a **liability** account

3) Increase or Decrease

**Advertising Expense** is increased by \$75 and **Accounts Payable - Beacon Advertising** is increased by \$75

4) Debit and Credit Rule

**Expense** accounts are increased on the **debit** side and **liability** accounts are increased on the **credit** side

5) Do Debits Equal Credits

**Debits** equal **credits**

## Advertising Expense

| + <span style="color: blue;">75</span> | - |
|--|---|
|--|---|

## Accounts Payable Beacon Advertising

| - | + <span style="color: green;">75</span> |
|---|---|
|---|---|

75 = 75  
Debit = Credit

ongoing transaction time paid stock assets  
company position payable account  
beginning company forward expenses  
not used capital shareholders  
ex end sheet represents like liability  
year financial value longterm carry  
cash closed retained  
expense equity current go  
revenue liabilities if zero  
current accounting

Thanks for your attention !
